Hiring Team

AMAZON

SOFTWARE DEVELOPMENT ENGINEER – 2026

JOB ID: 3119051

AMAZON CORPORATE SERVICES SWEDEN AB

Application for Software Development Engineer – 2026 (Job ID: 3119051)

Dear Amazon Hiring Team,

I am applying for the **Software Development Engineer – 2026** role (Job ID: 3119051) at Amazon because I want to build systems that directly impact customers at global scale. I am currently finishing my B.S. in Computer Science and Engineering (expected Dec. 2025, which fits the Oct. 2025 – Sep. 2026 graduation window) and I have more than three years of hands-on experience shipping production software that real users rely on.

In my current and recent roles, I have owned features end-to-end: designing, implementing, testing, deploying, and monitoring them in production. At **Publicis Global Delivery**, I delivered React Native features for a high-traffic retail app used across the U.S. I built TypeScript components with predictable state management and asynchronous data flows, integrated observability with Dynatrace, and wrote automated tests in Jest. Those improvements increased engagement by **30%** and reduced critical bugs by **25%**. I also automated **CI/CD pipelines with GitHub Actions**, cutting mobile release cycles by **50%** and helping the team deliver safely and iteratively.

Beyond mobile, I have shipped **React.js** and **Next.js** features for e-commerce and internal platforms, focusing on clean architecture, fault tolerance, and performance across device form factors. At **Grisú**, I built and deployed full-stack web apps (**React + NestJS**) to **Azure** using cloud services, secure deployment pipelines, and monitoring. I am comfortable working in distributed environments, debugging issues under pressure, and taking responsibility for production behavior.

Technically, I code in **TypeScript, Python, C++, and C#**, and I have a solid foundation in **data structures, algorithms, object-oriented design, and distributed client experiences**. I care about writing code that is maintainable, testable, and observable. I am used to working in an Agile environment, participating in code reviews, and documenting decisions so the team can move faster.

Culturally, Amazon's focus on ownership and customer obsession matches how I already work. I like being accountable for real outcomes, not just tickets. I like seeing the impact of what I build. I am fluent in English and Spanish, and I am fully open to relocating to Stockholm to join Amazon Corporate Services Sweden AB.

Thank you for your time and consideration. I would be excited to contribute to Amazon as an SDE, keep learning from experienced engineers, and help build reliable, scalable systems that make life better for millions of customers.

Sincerely,

Juan Manuel Young Hoyos
