AUTODESK

Application for Principal Software Engineer — Forma Design

Dear Autodesk Hiring Team,

I am applying for the **Principal Software Engineer** role on the Forma Design team. The part of your description that made me want to write is turning design automations into **reusable, configurable building blocks** that users can apply without writing code or understanding the implementation. That is exactly the problem I am working on today, in a different domain.

As **Technical Lead at Okorum Technologies** I set the technical direction for a national-scale interoperability platform and delivered it ahead of a hard government deadline. I architected it as a **Turborepo monorepo of NestJS microservices** coordinating staged processing over **message queues**, engineered fault tolerance and resumability so work survives an unreliable upstream system, and stood up **CI/CD on AWS** with full observability. I stayed hands-on in the code the whole way through — which is the part of this role I care most about keeping.

I have also driven architecture **beyond a single team**: as consulting architect through Grisú I defined system architecture for client organisations that other engineers then built against, and at Design Systems Inno I built the shared internal API platform — an asynchronous, queue-backed design where clients track long-running jobs by ticket rather than blocking — used across several product teams.

On **AI-enabled workflows**, I ship features to **Unicorn AI**, an internal AI-agent platform whose configurable per-role agents automate the work of developers, designers, accountants and lawyers. It is the same shape as your automations: reusable building blocks, adapted per context, with the complexity hidden from the user. I also use **Claude Code** and LLMs daily in my own engineering, while reviewing and validating everything they produce.

I lead through influence and example rather than authority — mentoring is something I have done deliberately for over a decade, from tutoring 100+ students to leading engineering and QA teams. I would welcome the chance to bring that, and a genuine interest in sustainable design tooling, to Forma Design. Thank you for your consideration.

Sincerely,

Juan Manuel Young Hoyos
