AEC Data Validation — Hiring Team

August 11, 2026

AUTODESK

Application for Senior / Principal Software Developer — AEC Data Validation

Dear Autodesk Hiring Team,

I am applying for the **Senior / Principal Software Developer** role on the AEC Data Validation team. Your stack reads like my daily one: **TypeScript** cloud services, **NestJS**, **React** and **Next.js**, microservices on AWS, and AI-powered development tools like **Claude Code**.

As **Technical Lead at Okorum Technologies** I am hands-on every day building an enterprise-scale data platform: a **Turborepo monorepo of NestJS microservices** that validate and transform records through staged processing over **message queues**, producing standards-compliant output for exchange across an entire national ecosystem. Data validation at scale, with strict correctness requirements, is precisely what the team does — mine simply happens to be healthcare records rather than building data.

I care about the operational side as much as the code. I model **MongoDB** persistence and added a **Redis caching** layer to keep throughput high under sustained multi-tenant load; I engineered **fault tolerance and resumability** so in-flight work recovers gracefully when an upstream API degrades; and I built the **CI/CD pipeline on AWS with GitHub Actions** plus full **observability** for logs, traces and metrics. That combination — reliable, secure, high-performance cloud services with automated deployment and real monitoring — is what I would bring to your on-call rotation and delivery commitments.

I also have the front-end half of your requirements: **React** and **Next.js** in TypeScript for Duluth Trading Company's e-commerce redesign, React Native for Wegmans (+30% in-app engagement), and secure **JWT / OAuth 2.0** authentication in client-facing services.

On your preferred qualification, I use **Claude Code** daily for implementation, refactoring, test generation and documentation — and I review and validate everything it produces. AI raises my throughput; engineering judgement still decides what ships. Finally, I enjoy the mentoring part of a senior role: I have led engineering and QA teams and taught for over a decade. Thank you for your consideration.

Sincerely,

Juan Manuel Young Hoyos
