Hiring Team

EPAM SYSTEMS

Application for Senior Full Stack Developer

Dear EPAM Hiring Team,

I am excited to apply for the **Senior Full Stack Developer** position at EPAM. With **4+ years building scalable applications end-to-end — backend services in GoLang and Python** paired with **React** front ends — I'm drawn to EPAM's model of putting engineers on international projects with top brands alongside diverse, highly skilled global teams. That's exactly the environment where I do my best work.

My backend experience maps directly to what you're looking for. At **Design Systems Inno** I designed and built internal **REST APIs in GoLang (Go Fiber) and Python (FastAPI)** on MongoDB, using **RabbitMQ** for a decoupled, asynchronous task architecture. More recently, as **Technical Lead at Okorum Technologies**, I drove the **system design** of a **microservices** platform for national health interoperability, delivered it ahead of a regulatory deadline, and made it resilient with caching and fault-tolerant, resumable queues.

On the frontend I have deep **React** expertise: a **Next.js + TypeScript** e-commerce redesign for **Duluth Trading Company**, production **React Native** for **Wegmans** (+30% in-app engagement), and React admin dashboards with Redux/Saga. Most recently I've been shipping features to **Unicorn AI**, an internal AI-agent platform that automates workflows for developers, designers, accountants and lawyers — spanning its **React** front end and **Python** retrieval backend, a good example of how I move across the stack rather than stopping at the boundary.

I care about doing this properly across the **SDLC**: contributing to **architectural decisions**, ensuring quality through **code reviews and automated testing** (Jest, Selenium), documenting technical designs, and shipping on **cloud stacks (AWS, Azure)** with **Docker** and **CI/CD** pipelines. My background also includes DevSecOps work that cut known vulnerabilities by 50%, so security and maintainability are habits rather than afterthoughts.

Having collaborated daily with US and European teams as a remote engineer, I'm comfortable communicating technical trade-offs clearly in English with product managers, designers and fellow engineers. Thank you for your time and consideration — I would welcome the opportunity to bring my full stack depth and problem-solving to EPAM's engineering teams.

Sincerely,

Juan Manuel Young Hoyos
