Frontend Engineering — Hiring Team

August 11, 2026

HELISING

Application for Software Engineer — Frontend

Dear Helsing Hiring Team,

I am applying for the **Frontend Software Engineer** role at Helsing. What stands out is that you have relatively few frontend engineers, which means the work is foundational: shaping the **React component library**, the standards and the tooling that everyone else builds on. That kind of leverage is what I look for, and the seriousness of the domain — including the ethical debate you invite — is a reason I want to work on it rather than a reservation.

I write **React** and **TypeScript** for live production software. As Technical Lead at **Okorum Technologies** I own the front end and the services behind it for a national-scale platform delivered ahead of a hard deadline, structured as a **Turborepo** monorepo where shared types and one CI pipeline keep contracts honest across front ends — the same instinct that makes shared component foundations worth building.

I have measurable results on the things you care about. I cut a React/Angular bundle from **3.46 MB to 886 KB**, built **reusable TypeScript components** that lifted Wegmans in-app engagement **30%**, cut critical bugs **25%** with a Jest testing strategy and Dynatrace monitoring, and led an e-commerce redesign for Duluth Trading Company in **Next.js** with responsive, accessible UX. I have also raised TypeScript quality across other teams' React Native codebases — unglamorous work that makes everyone faster.

I am comfortable going into **unfamiliar backends** to unblock myself: I have shipped Go, Python, Node.js and C++ (including a WebAssembly codebase), and I work with **REST and GraphQL** contracts daily. I have not written production **Rust** — I would like to learn it, and your posting says that is fine, so I will simply be straightforward about it.

The day-to-day you describe suits me: reviewing colleagues' work before advancing my own, writing RFCs, collaborating asynchronously, and mentoring. I have led engineering and QA teams and taught for over a decade. Thank you for your consideration.

Sincerely,

Juan Manuel Young Hoyos
