Engineering — Hiring Team

August 11, 2026

SEZZLE

Application for Mobile Engineer (Colombia)

Dear Sezzle Hiring Team,

I am applying for the **Mobile Engineer** role at Sezzle. I am based in Medellín, I work fully remotely with US teams already, and I have spent the last few years doing precisely what this role describes: building features in a high-traffic, cross-platform **TypeScript React Native** app.

At **Publicis Global Delivery** I built production React Native features for **Wegmans Food Markets**, one of the largest US grocery retailers. Modular TypeScript components with **Zustand** state management and Algolia search lifted **in-app engagement 30%**; comprehensive **Jest unit tests** and cross-device verification with BrowserStack cut bug incidence **25%**; and helping build a **CI/CD pipeline for Android APK generation** cut release-cycle time **50%**. Through Grisú I have also designed and **launched** my own React Native apps end to end, so I know the release path, not just the feature work.

Your requirement around **Claude and LLM tooling** is one I meet genuinely rather than aspirationally — I use **Claude Code** daily to build, refactor, generate tests, research and document, and I review and validate everything it produces. Speed matters, but defects should not get sent down the line, so AI raises my throughput without lowering the bar.

I also fit the wider stack. I have written backend services in **Golang** (Go Fiber) and **Python** (FastAPI), shipped **React** on the web, deployed with Docker on AWS and Azure, and used **GitLab** CI in my most recent role — so I can contribute across a full-stack team rather than only inside the app. On fintech specifically: my team won **1st place among 52+ teams from 16 universities** at the CivicaPay hackathon with a working mobile payments prototype, which is where my interest in payments started.

The parts of your culture description that resonate most are having relentlessly high standards and disagreeing then committing. I would rather raise a concern early and be wrong than stay quiet and be right later. Thank you for your consideration.

Sincerely,

Juan Manuel Young Hoyos
