Hiring Team

EPAM SYSTEMS

Application for Senior Full Stack Developer

Dear EPAM Hiring Team,

I am excited to apply for the **Senior Full Stack Developer** position at EPAM. I've spent **4+ years designing, developing and maintaining scalable applications** — writing **backend services in GoLang and Python** and building the **React** interfaces on top of them. EPAM's model of placing engineers on international projects with top brands, alongside diverse and highly skilled global teams, is exactly the environment where I do my best work.

GoLang is where a lot of my backend work lives. At **Design Systems Inno** I designed and built production **REST APIs in Go (Go Fiber)** and **Python (FastAPI)** on MongoDB, and architected a decoupled, asynchronous processing layer on **RabbitMQ** so clients received a ticket ID and polled long-running jobs instead of blocking — a **system design** decision that kept the platform responsive under heavy workloads. I've also written internal tooling in Go during security engineering work.

That architectural thinking scaled up as **Technical Lead at Okorum Technologies**, where I drove the design of a **microservices** platform for national health interoperability, delivered it ahead of a regulatory deadline, and made it resilient with caching and fault-tolerant, resumable queues — all running as **cloud-based solutions on AWS** with **CI/CD** and observability.

On the frontend I bring strong **React** experience: a **Next.js + TypeScript** e-commerce redesign for **Duluth Trading Company**, production **React Native** for **Wegmans** (+30% in-app engagement), and React admin dashboards with Redux/Saga. I'm currently shipping features to **Unicorn AI**, an internal AI-agent platform automating workflows for developers, designers, accountants and lawyers, spanning its **React** front end and **Python** retrieval backend. Working across the stack means I can carry a feature from architectural discussion through implementation, **code review**, **automated testing** and release — and document it clearly for team-wide visibility.

Having collaborated daily with US and European teams as a remote engineer, I communicate technical trade-offs comfortably in written and verbal English. Thank you for your time and consideration — I would welcome the opportunity to bring my Go, Python and React depth to EPAM's engineering teams.

Sincerely,

Juan Manuel Young Hoyos
