Hiring Team

HALTER

Application for Senior Software Engineer — Go-to-Market

Dear Halter Hiring Team,

I am excited to apply for the **Senior Software Engineer — Go-to-Market** role at Halter. What draws me in is the mission: taking one of the world's most advanced ag-tech platforms and levelling it up with **AI-powered products that actually ship, scale and make a genuine difference** — not demos, real software farmers rely on. Building internal tooling that helps a company move faster is exactly the kind of end-to-end, full-stack work I love.

I build across the stack. On the front end I ship **React, React Native and TypeScript**; on the back end I design production-grade **APIs and services in Node.js (NestJS) and Python (FastAPI)**. As Technical Lead at **Okorum Technologies**, I architected a national health-interoperability platform as a **Turborepo monorepo of NestJS microservices** coordinating an **event-driven data pipeline** over message queues, delivered it ahead of a government mandate deadline, and stood up **observability (Grafana, Loki) and CI/CD on AWS** so reliability and performance were designed in from day one.

I also bring hands-on experience turning **AI into a practical engineering tool**. At **Publicis Global Delivery** I ship features to **Unicorn AI**, an internal **AI-agent platform** whose custom agents automate the workflows of developers, designers, accountants and lawyers — working across its **React/Nuxt.js** front ends and its **Python RAG** backend. That's precisely the "AI-powered internal tooling" this role centres on, and it sits alongside production React Native for **Wegmans** (+30% engagement) and a Next.js e-commerce redesign for **Duluth Trading**.

I'm not precious about where a problem lives — frontend, backend, or the data pipeline in between — I just want to solve it well and bring the team along with me. I thrive in fast-paced, ambiguous environments where I get to own meaningful slices of the product and iterate quickly with cross-functional teams.

Finally, I'm genuinely energised by Halter's office-first culture and **ready to relocate to Auckland** to be in the room with the team. Thank you for your time and consideration — I would love the chance to help build the AI-powered surfaces that Halter's customers, support and commercial teams depend on every day.

Sincerely,

Juan Manuel Young Hoyos
