Hiring Team

INTELLIAS

Application for Senior Python Backend Engineer

Dear Intellias Hiring Team,

I am excited to apply for the **Senior Python Backend Engineer** position at Intellias. Your role reads like a description of what I am doing right now: as **Technical Lead at Okorum Technologies** I am delivering a national **healthcare interoperability** platform built on **HL7 FHIR R4**, so the “nice to have” at the bottom of your posting is my day job.

That platform is a distributed system of **microservices** that stream send / validate / convert / generate stages over **message queues** to produce standards-compliant FHIR resources for EHR data exchange. I model its **MongoDB** persistence, added a **Redis** caching layer, and engineered **fault-tolerant, resumable asynchronous queues** so in-flight submissions survive an unreliable upstream government API. We shipped ahead of a hard national compliance deadline.

On the **Python** side, I have used the language across services, automation and tooling since 2021. I have built production **REST APIs with FastAPI** on MongoDB, architected a decoupled **asynchronous** processing layer on RabbitMQ where clients poll long-running jobs by ticket ID instead of blocking, and delivered an event-driven system in FastAPI and Kafka. I secure services with **OAuth 2.0 / OIDC / JWT**, containerise with **Docker**, and cover them with **Pytest** and CI/CD.

I also take your emphasis on **AI-assisted development** seriously rather than as a buzzword. I work daily with **Claude Code** and LLMs for code generation, refactoring, test generation and documentation — and, just as importantly, I review and validate what they produce. AI accelerates delivery; engineering judgement still decides what ships.

Finally, a fully remote, **100% English** environment suits how I already work: I have collaborated daily with US and European teams for years. Thank you for your time and consideration — I would welcome the chance to bring my Python, distributed-systems and healthcare interoperability experience to Intellias.

Sincerely,

Juan Manuel Young Hoyos
