Hiring Team

VISA · TINK

GRADUATE SOFTWARE ENGINEER

STOCKHOLM, SWEDEN

Application — Graduate Software Engineer (Visa · Tink, Stockholm)

Dear Visa · Tink Hiring Team,

I am applying for the **Graduate Software Engineer** role at **Visa · Tink** in Stockholm. I will complete my B.S. in Computer Science and Engineering in **Dec. 2025** and am **available to start Summer 2026**. I want to help build reliable, secure financial infrastructure that real users depend on—exactly the kind of impact Tink has across open banking.

I have shipped production software end-to-end across web and mobile: designing, implementing, testing, deploying, and monitoring real features used by thousands of users. At **Publicis Global Delivery**, I delivered React Native features (TypeScript, predictable state, async data flows), increased engagement by **30%**, reduced critical bugs by **25%** through testing and observability, and automated **CI/CD** with GitHub Actions to cut release cycles by **50%**. On the web, I've built **React/Next.js** features for e-commerce and internal platforms with a focus on performance and fault tolerance across device form factors.

On the backend, I've delivered APIs and services with **Golang (Fiber, GORM)** and **Postgres/MongoDB**, containerized with **Docker**, and deployed to **Azure/AWS**. I'm comfortable with **REST services, microservices, SQL & NoSQL, Unix/Shell**, and collaborative tooling (GitHub; Bitbucket familiar). My foundation includes **data structures, algorithms, OOP**, code reviews, and documentation. While my recent backend work has been in **Go**, I'm fully prepared to pick up **Java** quickly if needed.

Visa/Tink's mission—secure, high-availability financial connectivity through APIs—matches how I like to work: own problems end-to-end, measure outcomes, and iterate with care for reliability and customer trust. I am fluent in English and Spanish, **open to relocate to Stockholm**, and ready for a hybrid schedule.

Thank you for your time and consideration. I would be excited to learn from the team and contribute to Tink's open banking platform and developer experience.

Sincerely,

Juan Manuel Young Hoyos
