Factory Software Engineering — Hiring Team

August 12, 2026

TESLA — GIGAFACTORY BERLIN-BRANDENBURG

Application for Senior Software Engineer (TypeScript, React)

Dear Tesla Hiring Team,

I am applying for the **Senior Software Engineer (TypeScript, React)** role with the Factory Software Engineering team at Gigafactory Berlin-Brandenburg. Building software that streamlines factory operations — where the users are on the line and the cost of a slow or confusing interface is measured in real output — is far more interesting to me than another consumer web app.

I own **frontend architecture** on complex, enterprise-scale applications: component design, **state management** and data-fetching patterns. As Technical Lead at **Okorum Technologies** I own both halves of a national-scale platform — the **React + TypeScript** front end and the TypeScript services behind it — in a single **Turborepo** monorepo with shared types, which is how I prefer to keep frontend and backend contracts honest. We shipped ahead of a hard government deadline.

The fundamentals you list are ones I have measurably practised. I cut a React/Angular bundle from **3.46 MB to 886 KB** through build and **browser performance** optimisation; I led Duluth Trading Company's e-commerce redesign in **Next.js + TypeScript** with responsive, accessible UX across desktop, tablet and mobile; and I drove a testing strategy at Wegmans (**Jest**, BrowserStack, **Dynatrace** monitoring) that cut critical bugs **25%** while **CI/CD** automation cut release time **50%**. I have used **Playwright** for browser automation and **Selenium** for test automation earlier in my career.

I am also genuinely comfortable crossing into the backend: I have written **Golang** services (Go Fiber) and Python APIs, worked with **REST and GraphQL** contracts, and deploy with **Docker**. When a feature needs a backend change to land, I would rather write it than wait for it.

I am ready to relocate to Grünheide, and Tesla's speed and efficiency are the reasons I want to be there rather than a deterrent. Thank you for your consideration.

Evidence of Excellence

- **1st place, CivicaPay Hackathon 2022** — won against **52+ teams from 16 universities** with a working mobile payments prototype.
- **3rd place, Expo-Ingenierías (EAFIT)** for **SIMA**, an automated irrigation and monitoring system.
- **Full national merit scholarship** “Ser Pilo Paga” — awarded for top academic performance in Colombia.
- **Shipped a national-scale platform ahead of a government mandate deadline** as Technical Lead, leading a cross-functional team.
- **Measured impact:** +30% in-app engagement (Wegmans), -50% release-cycle time, -50% known vulnerabilities in 4 months, bundle size 3.46 MB → 886 KB.

Sincerely,

Juan Manuel Young Hoyos
