Hiring Team

MERCADO LIBRE — MERCADO PAGO IT

Application for Software Engineer — Backend

Dear Mercado Libre Engineering Team,

I am applying for the **Software Engineer — Backend** position at **Mercado Pago IT** because I want to help build the financial infrastructure that empowers millions across Latin America.

I hold more than **4 years of professional experience** designing and shipping software across mobile, backend, and distributed environments, mainly using **TypeScript**, **Go** and **Python**. I currently work at **Publicis Global Delivery**, delivering high-impact, production-grade apps and optimizing performance through CI/CD, observability, and cloud deployments (AWS and Azure).

At **Grisú** and **Design Systems Inno**, I designed asynchronous, event-driven backends using **Go Fiber**, **FastAPI**, **RabbitMQ**, and **Kafka**, improving scalability and reliability for real-time data flows. My background also includes system security and DevSecOps practices (OWASP, SonarQube), which helps me write maintainable, auditable, and production-safe code.

I'm passionate about **distributed architectures, clean code, microservices, and automation**. Mercado Libre's focus on impact, learning, and innovation in fintech strongly aligns with my goals as an engineer who wants to build robust, accessible technology for Latin America.

Thank you for considering my application. I'd be excited to contribute to Mercado Pago's backend systems, learn from your engineering culture, and keep pushing the boundaries of scalability and reliability in financial services.

Sincerely,

Juan Manuel Young Hoyos
