Hiring Team

EPAM SYSTEMS

Application for Senior JavaScript Developer

Dear EPAM Hiring Team,

I am writing to apply for the **Senior JavaScript Developer** position described for the financial data / Eikon-related project. I have a little over **3 years of professional experience with JavaScript and TypeScript**, building production mobile and web apps in **React** and **React Native**, integrating CI/CD, and improving performance using observability tools such as **Dynatrace**.

In my current role at **Publicis Global Delivery**, I build React Native features that are actually used in production by thousands of users. I work with **Zustand** for predictable state, write **Jest** tests, collaborate with QA through **BrowserStack**, and help keep the pipeline healthy using **GitHub Actions**. Before that, at **Design Systems Inno**, I had to optimize and dockerize frontends *for both React **and** Angular projects*, reducing bundle sizes from 3.46 MB to about 886 KB. Because of that exposure I understand Angular project structure, build steps, and where performance problems usually appear, even if my **main production experience is React/TypeScript**.

Your role asks for **Angular 4+ or AngularJS**. I want to be fully transparent: my core stack is React/TypeScript, but I have worked in mixed environments where Angular apps were part of the delivery, and I have no problem ramping up to Angular 4+ quickly — especially for a structured project like the one you describe (financial analysis, real-time info, Electron integration). I already work with real-time and data-heavy UIs (React Native + Algolia, Kafka-based projects, dashboards), so the idea of improving **performance, efficiency and stability** of several applications is very familiar to me.

I am used to working with distributed teams, clarifying requirements directly with stakeholders (Grisú, ArcDesign), and doing demos/iterations with non-technical people. My background in **cybersecurity and DevSecOps** also helps me write higher-quality, reviewable JavaScript code and spot risky patterns early.

I would be glad to join EPAM and bring solid JavaScript/TypeScript fundamentals (data structures, async, complexity awareness), real production experience, and the willingness to close the Angular gap fast.

Sincerely,

Juan Manuel Young Hoyos
